Boat House Lifts

RGC Advantage

RGC Boat House Lifts have been protecting boats from debris, rough water and damaging weather for over 60 years.

Installation is easy using only basic hand tools, and operation requires just the turn of a switch. Boat House Lifts can be installed in new or existing boat houses.

Galvanized wire rope is reeved through a series of blocks and attached to an overhead power drive mounted to beams in the center of the boat house roof.

Boat House Lift with Adjustable Slings

Features & Benefits

- Models available to lift up to 2500, 4500, 6000 and 9000 lbs.
- An exceptional lifting range makes the Boat House Lift ideal for fluctuating water levels.
- Excellent lift for rough water or floating debris conditions.
- Plated brackets and hangers fit 6 in. wide beams.
- Easily installs in existing boat houses.
- Adjustable to fit most boat dimensions.
- GFCI protection is standard on all power drives.
- Power drives offered with optional remote control.
- Choose between nylon slings and galvanized steel I-beam cradles to support your boat.
- Blocks with brass bushings are available as an upgrade.
- 5 year limited warranty on galvanized steel materials and workmanship in fresh water applications.

Accessories

- **I-Beam Cradles** provide full length support of boat's hull and are ideal for choppy water conditions. *(Wood bunks are not included)*
- **Nylon Slings** are adjustable and conform to the boat's hull. Sold in pairs of 2 in., 4 in. and 6 in. widths with hardware.
- **Remote Control** kits enable you to raise and lower your boat from up to 100 feet away.
- **Blocks with Brass Bushings** are options that can extend the service life of your lift. Call the factory for details.
